HOW DO WE WORK?

Our strategic approach and implementation framework

Initialize • Industrialize • Institutionalize

The Three Steps to Automation Maturity

Achieving digital transformation starts with fully coordinating your organization's people, processes and technologies. Taking this three-step approach, we'll help you to ascertain, adapt and enhance your capabilities as you progress down the path to automation maturity.

01

INITIALIZE
Set-up Automation Incubation Center

We help you set up and operationalize a core team, then define standard processes, governance, frameworks, methodologies, assessment criteria and metrics.

02

INDUSTRIALIZE
Scale the Program with a Center of Excellence

We drive automation across any line of business, starting with establishing an "Automation Factory" to train and enable an operations team to monitor and manage the automations. From there, we expand robotics efficiencies to include cognitive capabilities, including speech and chat bots and document understanding.
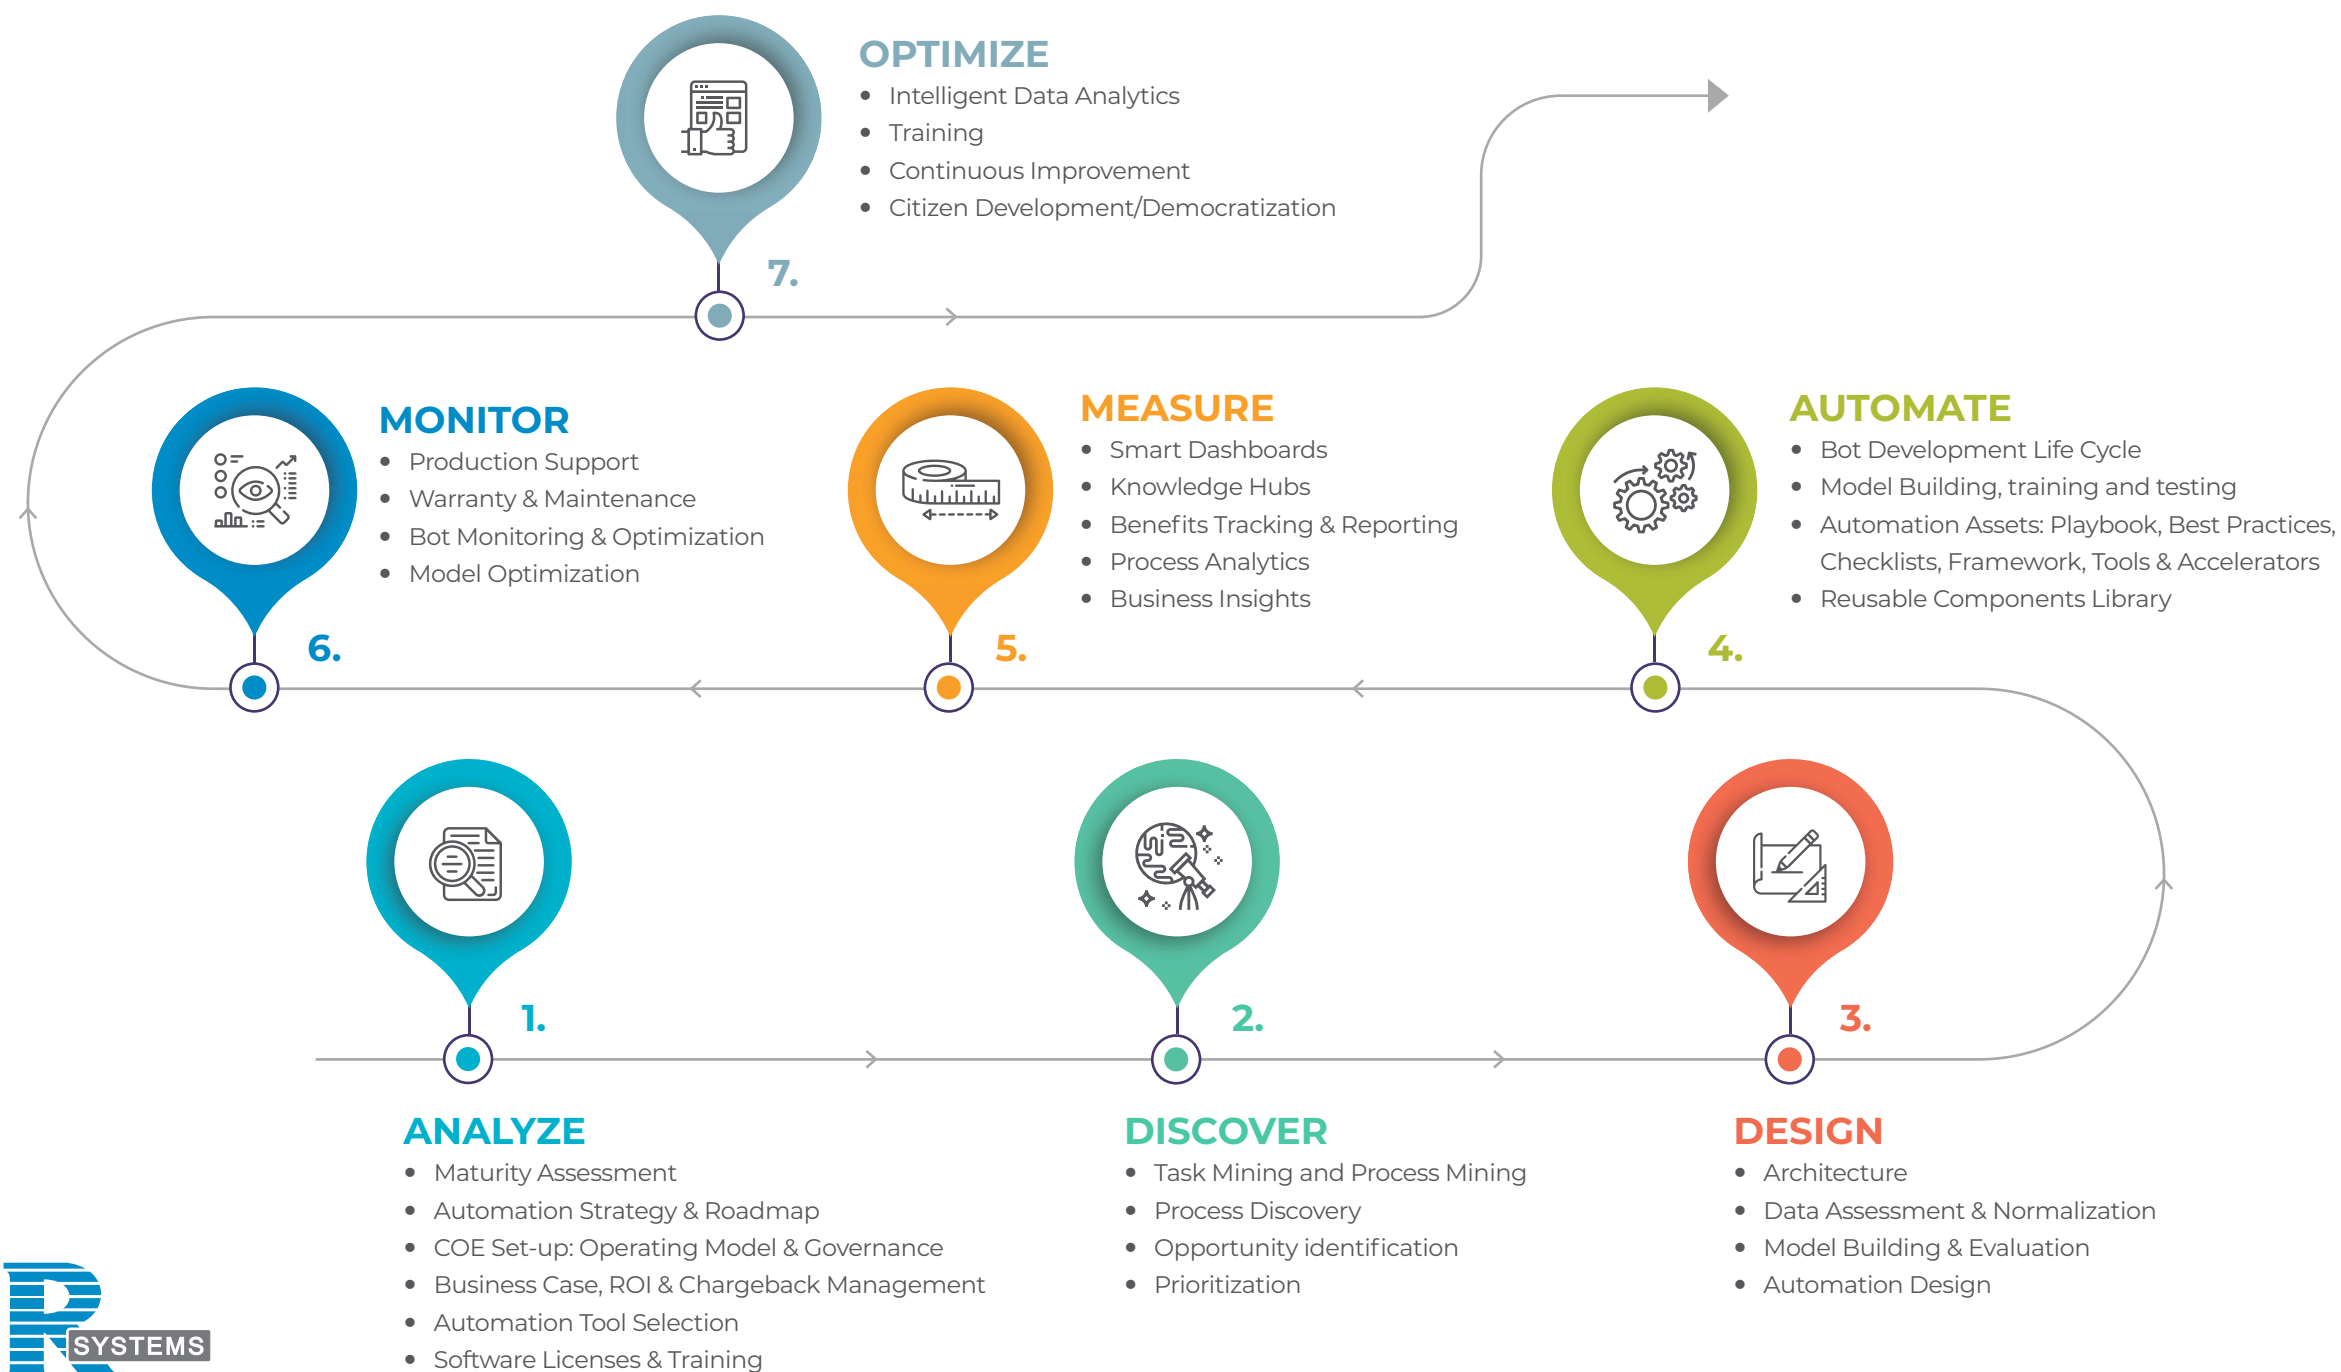

03

INSTITUTIONALIZE
Making Automation a Way of Life through Democratization

To reach full automation maturity, we'll help drive automation across enterprise, continually expanding your capabilities. These include predictive modelling, enabling virtual workforces, and identifying automation champions within your organization. The goal is to drive continual improvement through ongoing automation extensions and innovations.

HOW DO WE WORK? (con't)

Our Implementation Framework

OPTIMIZE
- Intelligent Data Analytics
- Training
- Continuous Improvement
- Citizen Development/Democratization

7.

MONITOR
- Production Support
- Warranty & Maintenance
- Bot Monitoring & Optimization
- Model Optimization

6.

MEASURE
- Smart Dashboards
- Knowledge Hubs
- Benefits Tracking & Reporting
- Process Analytics
- Business Insights

5.

AUTOMATE
- Bot Development Life Cycle
- Model Building, training and testing
- Automation Assets: Playbook, Best Practices, Checklists, Framework, Tools & Accelerators
- Reusable Components Library

4.

1.

ANALYZE
- Maturity Assessment
- Automation Strategy & Roadmap
- COE Set-up: Operating Model & Governance
- Business Case, ROI & Chargeback Management
- Automation Tool Selection
- Software Licenses & Training

2.

DISCOVER
- Task Mining and Process Mining
- Process Discovery
- Opportunity identification
- Prioritization

3.

DESIGN
- Architecture
- Data Assessment & Normalization
- Model Building & Evaluation
- Automation Design
